TEAM joins BPO

More than two decades of experience

TEAM is an engineering and services company offering sophisticated Passenger Boarding Bridges (PBBs) for the cruise and ferry terminals. TEAM is not only responsible for the design and manufacturing, but also for installation and maintenance of its technologically advanced solutions in ports all over the world.

TTEAM now has more than 20 years of experience in the maritime sector and is the passenger boarding bridge cruise and ferry industry leader with more than 90 PBBs designed and supplied to 35 seaports worldwide.

Success story

In 2011 TEAM won the largest seaport PBB contract in the history of the cruise industry. The Hong Kong Government contracted TEAM to supply five HYDRA PBBs for its new Kai Tak Cruise Terminal after a tender process, based on innovative technologies, quality standards, reliability and proven service record. The investment will be finished in 2014 and consists of five mega PBBs of five tunnels and 170 tonnes weight each, designed to serve all existing and future cruise ships, including mega vessels with overhanging lifeboats. For the first time, the units will be equipped with solar panels for security lighting.

In November 2012, TEAM received the "Supplier of the Year" finalist award in the sixth Seatrade Insider Cruise Awards. An independent panel of experienced judges selected TEAM as one of the three prize-winners out of 70 entries. "This is the third time our company receives special recognition from cruise industry experts and it confirms that our adaptability to the specific needs of cruise lines and terminal operators along with designing and delivering the safest and technologically most advanced boarding systems, is highly appreciated," commented Jordi Floreta, Vice-President and Managing Director of ADELTE Group.

TEAM plays in a team

Since 2011, TEAM has been part of the ADELTE Group, which gathers three companies concentrated on the global travel and trans-

port industries (TEAM Ingenieria del Transporte, ADELTE Ports & Maritime, ADELTE Airport Technologies). TEAM Ingenieria del Transporte provides tailor-made trailers and other special vehicles under the TRABOSA brand. ADELTE Airport technologies offers solutions for international airports, from passenger boarding bridges and terminal solutions to ground support equipment and global airport services. All three companies share experience and innovative ideas.

TEAM's last innovation, launched in 2013, is called ARGOS. It is a ship to shore mobile passenger gangway designed to guaranty safety and comfort for all cruise and ferry passengers at any seaport.

In this kind of business, close co-operation with the maritime companies is also crucial. This is one of the reasons why TEAM takes part in a dozen trade shows every year around the world such as Cruise Shipping Miami, Seatrade Europe, Cruise Shipping Singapore, etc. The real challenge is not to find the potential contractors, but to know their specific problems and together work out tailor-made solutions. Joining BPO is another step in integrating the shipping sector players.
